

Remote trigger in the absorkas

Date

Sat, 02/10/2024 - 13:25

Activity

Skiing

Toured out of mill creek today, at around 9200 feet we remote triggered a slide.

HS-ASr-R1-D2-O

We were ascending a low angle shoulder when a NE facing slope around 20ft away went. Crown was around 2ft deep on both sides and around 4ft at the deepest. It broke on the layer of December facts with a pencil hard slab around 1ft-2ft thick. Above the older slab was new snow about 1ft deep in non wind loaded areas, and around 2ft deep in wind loaded areas. It ran about 300ft and was 50ft wide.

Region
