

Natural Avalanches on Saddle Peak

Date

Mon, 11/25/2024 - 04:00

Driving up Bridger Canyon this morning, we noted several natural avalanches in wind loaded terrain on Saddle Peak, the Football Field, and in Mundy's Bowl. All The avalanches seems to be a similar [wind slab](#) problem. They broke just below the [cornice](#) line. From a distance and considering yesterday's new snow, I would guess a foot deep or so (R2, D2, I)

Region

Bridger Range

Location (from list)

Saddle Peak

Observer Name

Dave Zinn
